Arithmetic Operators 🔖

by shashank21j

Tutorial	Problem	Submissions	Leaderboard	Discussions	Editorial

Let's learn about Python's arithmetic operators.

First, let's read two integers:

```
#Python 2
a = int(raw_input())
b = int(raw_input())

#Python 3
a = int(input())
b = int(input())
```

The three basic arithmetic operators are the following:
- Addition (+)
- Subtraction (-)
- Multiplication (*)

(We'll learn about division in the next task.)
