Check Tutorial tab to know how to to solve.

Here is a sample line of code that can be executed in Python:

```
print("Hello, World!")
```

You can just as easily store a string as a variable and then print it to stdout:

```
my_string = "Hello, World!"
print(my_string)
```

The above code will print `Hello, World!` on your screen. Try it yourself in the editor below!
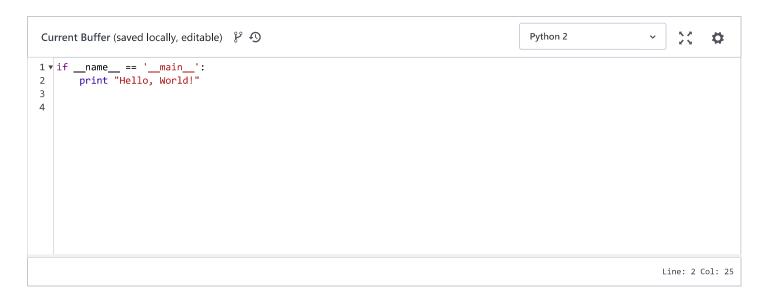

Input Format

You do not need to read any input in this challenge.

Output Format

Print `Hello, World!` to stdout.

Sample Output

```
Hello, World!
```

Current Buffer (saved locally, editable) ⑂ 🕐   Python 2 ⌄   ⤢ ⚙

```
1 ▾ if __name__ == '__main__':
2        print "Hello, World!"
3
4
```

Line: 2 Col: 25
